## **FEMALE GENITAL MUTILATION** Multi-agency Guidance

Date approved by LSCB and LSAB	March 2017
Author	Fiona Finlay
Detail of review amendments	Updated March 2019
Detail of review amendments	Updated to become joint guidance with LSAB and include adult services. Now includes information on body piercing and clarity of mandatory reporting via 101 for girls under 18 years. March 19 – Updated with new Virgin Care Adult Safeguarding Team telephone number
Date for review	December 2019

## 1. Introduction

Female genital mutilation (FGM) is a collective term for all procedures involving partial or total removal of the external female genitalia, or other injury to the female genital organs for non-medical reasons. It has no health benefits and harms girls and women in many ways. It involves removing and damaging healthy and normal female genital tissue and hence interferes with the natural body functions. The practice causes severe pain and has several immediate and long-term health consequences, including difficulties in childbirth.

FGM is illegal and in under 18s is child abuse (see section 4).

## 2. Types of FGM

FGM has been classified by the World Health Organisation into four types:

- Type 1 - Clitoridectomy: partial or total removal of the clitoris (a small, sensitive and erectile part of the female genitals) and, in very rare cases, only the prepuce (the fold of skin surrounding the clitoris).
- Type 2 – Excision: partial or total removal of the clitoris and the labia minora, with or without excision of the labia majora (the labia are the ‘lips’ that surround the vagina).
- Type 3 – Infibulation: narrowing of the vaginal opening through the creation of a covering seal. The seal is formed by cutting and repositioning the inner, or outer, labia, with or without removal of the clitoris.
- Type 4 – Other: all other harmful procedures to the female genitalia for non-medical purposes, e.g. pricking, piercing, incising, scraping and cauterising the genital area.

The age at which girls undergo FGM varies enormously according to the community. The procedure may be carried out when the girl is new-born, during childhood or adolescence, just before marriage or during the first pregnancy. However, the majority of cases of FGM are thought to take place between the ages of 5 and 8. Girls may be genitally mutilated illegally by health workers or doctors in the UK or they may travel abroad for the procedure.

Genital piercing is classified as FGM. Most ‘responsible piercers’ will not do intimate piercings on anyone under the age of 18 years, however it does still occur although it is illegal and should be reported.

## 3. Prevalence

FGM is practised around the world in various forms across all major faiths. Today it has been estimated that currently about three million girls, most of them under the age of 15 years of age, undergo the procedure every year. The majority of FGM takes place in 29 African and Middle Eastern countries. It also occurs in other parts

of the world through migration including the Middle East, Asia, Europe, North America, Australia and New Zealand.

Globally, the World Health Organisation (WHO) estimates that between 100 and 140 million girls and women worldwide have been subjected to one of the first three types of female genital mutilation.

It is estimated that there are around 74,000 women in the UK who have undergone the procedure, and about 24,000 girls under 16 who are at risk of Type III procedure and a further 9,000 girls at risk of Type I and II.

It is important to note that, whilst not many cases come to light locally, FGM is an issue for some girls and women living in B&NES.

#### 4. Law

- **FGM constitutes a form of child abuse and violence against women and girls.**
- **The Female Genital Mutilation Act 2003 made FGM illegal in the UK (except on specific physical and mental health grounds).**

It is an offence to:

- Undertake the operation (except on specific physical or mental health grounds).
- Assist a girl to mutilate her own genitalia.
- Assist a non-UK person to undertake FGM of a UK national outside the UK (except on specific physical or mental health grounds).
- Assist a UK national or permanent UK resident to undertake FGM of a UK national outside the UK (except on specific physical or mental health grounds).

The penalty for FGM is up to 14 years imprisonment.

#### 5. Recognition

The following are some indicators that FGM may be planned. Taken in isolation they do not prove FGM will happen but they are indicators for further investigations.

- Any female child born to a woman who has been subjected to FGM should be considered to be at risk, as must other female children in the extended family.
- Parents from practising communities state they or another family member will take the child out of the country for a prolonged period.
- A child may talk about a long holiday to a country where the practice of FGM is prevalent.

- A child may say that she is to have a “special procedure” or “special party”.
- A professional hears reference to FGM in conversation.

Indicators that FGM may already have taken place:

- A prolonged absence from school with noticeable behavioural changes on return.
- A girl having bladder or menstrual problems.
- Soreness, infection or unusual presentation noticed on nappy changing or helping with toileting.
- Recurrent urinary tract infections or complaints of abdominal pain.
- Difficulty walking or sitting or reluctance to participate in sport.
- Conversations or observations with midwife during pregnancy/birth.

When talking to the family you should consider using an interpreter whose values on FGM are known. Family members should not be used as interpreters.

## 6. Safeguarding Response

### a) Safeguarding Children:

Any suspicion of intended or actual FGM must be referred to the police and to Children’s Social Care.

Health professionals in GP surgeries, sexual health clinics or maternity services are the most likely to encounter a girl or woman who has been subjected to FGM.

- From April 2014 it has been a mandatory requirement for NHS hospitals to record FGM.
- From September 2014 all acute hospitals have been required to report this data to the Department of Health.
- From 31<sup>st</sup> October 2015 it has become mandatory for all regulated health and social care professionals and teachers in England and Wales that become aware of FGM either through visual identification or verbal disclosure to report FGM in girls under 18 to the Police (via the 101 call facility) and then to Children’s Social Care. While the duty is limited to the specified professionals described above, non-regulated practitioners also have a responsibility to take appropriate safeguarding action in relation to any identified or suspected case of FGM, in line with wider safeguarding frameworks.

<https://www.gov.uk/government/publications/mandatory-reporting-of-female-genital-mutilation-procedural-information>

The circumstances in which a mandatory report has to be made via 101 are:

- A girl under 18 discloses to a regulated professional that she has had FGM
- Regulated professional sees that a girl under 18 has had FGM

Midwives should talk about FGM at initial booking to all women who come from countries that practise FGM or if they are married or have a partner who comes from practising communities. If a woman has FGM, a plan should be made for birth that takes account of this. It should be documented if the woman has had FGM and a referral made to Children's Social Care.

After childbirth, a woman who has been de-infibulated may request re-infibulation. This is illegal and should be explained as such. Some women may be pressured to ask for re-infibulation by their partner. This should be dealt with under the category of domestic abuse.

Where the adult lacks capacity, it should be treated as a safeguarding concern. Where the mother is a child, a safeguarding referral should be made to Children's Social Care. School Nurses are in a good position to reinforce information about health consequences and the law relating to FGM, working closely with schools and supporting them in any concerns. They should be vigilant to any health issues which may indicate that FGM has occurred. Any concerns about a parent's attitude to FGM should be taken seriously and appropriate referrals made.

Emergency Departments and Walk-in Centres need to be aware of the risks associated with FGM if girls/women from FGM practising countries attend, particularly with urinary tract infections (UTIs), menstrual pain, abdominal pain, or altered gait for example. They should assess the risks associated with FGM and make a referral to Social Care if concerned.

Teachers, other school staff, volunteers and members of community groups may become aware that a female is at risk of FGM, e.g. they may be aware that a child is going abroad on a long holiday for a "special party". If there are concerns about them a referral must be made to Children's Social Care.

#### On receipt of referral

When Children's Social Care receives a referral with regard to FGM, a strategy meeting should subsequently be convened if:

- There is suspicion that a girl or young women under 18 years is at risk of FGM.
- It is believed that a child/young person is going to be sent abroad for that purpose.
- There are suggestions/indications that a girl/young woman has already undergone FGM.
- Where a prospective mother has undergone FGM.

A girl believed to be in danger of FGM may be made the subject of a protection plan, under the category of risk of physical abuse, if the criteria are met.

The main emphasis of work in cases of actual or threatened FGM should be through education and persuasion, and this should be reflected in the child protection plan.

## **b) Safeguarding Adults**

If a woman has care and support needs, is not able to protect themselves and is at risk of experiencing FGM, a referral should be made to Virgin Care Adult Safeguarding Team by contacting telephone number 0300 247 0201.

If a female adult has undergone FGM, they should be given advice and referred to available support services, including the option of supporting a prosecution if they are willing to do so.

The concern will be considered under the LSAB Safeguarding Adults Procedures and action taken as appropriate in line with the views and wishes of the person.

If the woman is not viewed as meeting the requirements for adult safeguarding the referring person/organisation will be informed of the decision and provided with information about how to contact the police on the non-emergency helpline (101).

If a woman has undergone FGM, they should be given advice and referred to available support services, including the option of supporting a prosecution if they are willing to do so. Consideration should also be given to the wider support needs the woman may have including immigration, housing, debt, childcare and counselling support through community groups and domestic abuse specialist support. A referral to the local Multi-Agency Risk Assessment Conference (MARAC) may be deemed necessary (please contact 0300 247 0201 and ask to be put through to the Safeguarding Adults Lead for further advice on this).

If a woman discloses the intention to undergo FGM, a referral should be made to the police as above. The woman should be informed of the intention to do this.

### Support Services

Support should be offered to woman and girls who have undergone FGM. Counselling and support may be accessed from the 'Green House Service' in Bristol (telephone 0117 935 1707).

FORWARD work with women, girls and men so they can be positive role models and provide support for communities.

Further information about support services is available from:

## 7. Prevention

Agencies should work together to promote better understanding of the damaging consequences to physical and psychological health of FGM.

The aim should be to work in partnership with parents / families to raise their awareness of the harm caused to the child and to prevent FGM taking place.
